

INSTRUCTIONS

Installation is simple and quick

The glow plug connector is spring loaded for a good connection to the glow plug stem. Hold the black rubber cap between your thumb and index finger. Pull gently on the cable. This will retract the spring within the cap and allow the glow plug stem to enter the connector. Release the cable and it's connected . . .

Special Note . . .

Some glow plug stems are longer than normal. This new connector is made long enough to cover the total stem. However, if the stem on your plug is short the black rubber glow plug connector must be shortened. Simply measure the height needed and use a sharp hobby knife to cut the black rubber cover as shown in the photo.

Special glow plug harness's are available, factory assembled for Sonic-Tronic / McDaniels Glow Drivers single through multi cylinder. Contact Sonic-Tronics by phone FAX or Email.
